

# Laser etching

**EXAMPLE TIP SIZE**

10mm x 25mm

**APPROX. ETCH AREA**

~18 x 6mm

**FINISH**

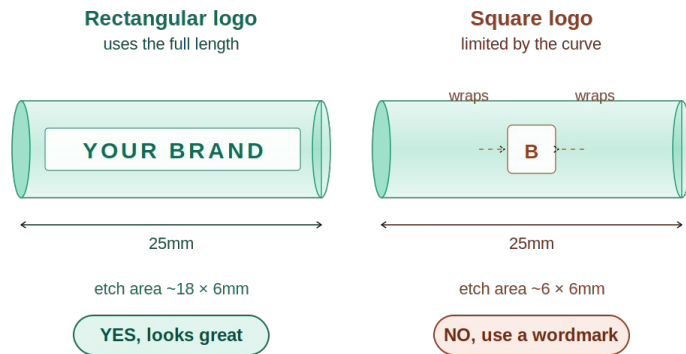

Frosted matte on clear

**COLOR**

Frosted look only

## 01 Logo shape decides everything

RipTips are small and curved. The visible face of a 10mm cylinder is only ~6-7mm wide before the curve takes over. Rectangular logos use the full length and stay sharp. Square and circular logos shrink to fit, and detail disappears.

YES, ETCHES BEAUTIFULLY		NO, WON'T ETCH WELL	
Single-color logo	Horizontal lockup	Detailed crest, fine text	Multi-color logo
Simple monoline icon	Heavy geometric type	Gradients and shadows	Thin lines, fine serifs

### WHAT TO SEND

- Vector files only: .ai, .eps, .svg, or .pdf
- Single color, black on transparent
- All text converted to outlines
- No JPEG or PNG (rasters can't etch)

### THREE RULES

- Strip it down. Drop the tagline and est. date
- Test at actual size: print at 18mm wide
- Bold beats delicate. No lines under 0.5pt

### HOW IT WORKS

- Send files to [info@theriptip.com](mailto:info@theriptip.com)
- Best on sizes 10mm to 12mm, where the etch area is largest. We don't recommend etching on 7mm tips
- Production: 2 to 3 weeks on in-stock tips. 100 tip minimum, can be split across sizes

#### Can I get my logo in color?

Not with etching. Decals support 2-3 colors.

#### Can you redraw my logo?

No, please send finished vector files ready to etch.

#### What if it doesn't fit?

We'll flag it before production and ask for alternatives.
